

WHY EVAULT FOR FINANCIAL SERVICES COMPANIES?

EVault is *the* data protection expert, trusted by hundreds of financial services companies globally. Since 1997, we've delivered easy-to-use, complete solutions that control costs and keep data secure, compliant, and easy to manage and recover. Seamless scalability ensures protection as your data grows.

100% disaster recovery

Among your peers who have suffered disasters, many chose EVault so they can say, "Never again." You get the fastest, most reliable online backup and recovery available. In addition, our Professional Services team can help you devise and test emergency procedures and conduct training based on your specific needs. If disaster strikes, you're covered.

Central control and brilliant simplicity

Everything is easy, from setup and scheduling to reporting and restores. That includes offices across the hall or across the country, using EVault's Web CentralControl interface. So it's easy to satisfy your company's data retention policies. You also control costs—no more productivity lost needlessly to the restore process. You also get EVault's passionate support from expert insiders, at no cost—24x7 for critical issues.

Business Continuity ensured

If a serious business disruption occurs, you need a plan that goes beyond data protection to ensure you return to operations quickly. EVault's Business Continuity Management Practice helps you develop a program to maintain client communication, minimize risk, and protect your reputation. We work with you to assess your requirements, identify gaps, develop scenario-based strategies, write a plan, and test.

Certified, compliant security and privacy

EVault makes it easy to comply with regulatory requirements, including the Gramm-Leach-Bliley Act. FIPS-approved, 256-bit AES encryption shields data in transit *and* in storage, and there's no "back door" to let anyone view protected information, not even EVault. There are no tapes or physical transport involved—EVault's online, disk-to-disk backup eliminates human error.
