

You've **installed** your firewalls.
You've **secured** your data center.
You've **instituted** your IDS.

Who's protecting your voice network?

Sound Communications Group offers a truly one-of-a-kind solution designed to protect your voice network from costly "telethieves". In the US alone the average cost of voice network hacking is estimated at \$100,000 per incident.

We can protect your business with our unique offerings: **PSTN Firewall, Security Audit on the Enterprise Voice Platform, Traffic Analysis, Disaster Recovery, and Statistical Reporting.**
