Securing the Multicloud for Finance  
Virtual Event  
As most financial services firms begin embracing the multicloud, challenges remain in the areas of security, risk management, governance, orchestration, operations, and reducing TCO. This session focuses on the challenges of enabling secure multicloud operations in the financial world, as well as best practices and solutions.

Agile Meets the Real World  
Virtual Event  
There's a lot of hype around the capabilities of agile methodology. But where is Agile most effective in practice? Agile is not just a tool, but needs to look collectively at people, process, and technology to be truly effective. We must look at problems and see what we are trying to solve. We need to think about things that connect to each other and create transformational value. This event focuses on the lessons learned from the Agile Revolution.

The Data-Driven Enterprise: Driving Business Transformation  
Virtual Event  
Data fundamentally drives business decisions. A recent Nemertes survey found 100% of financial services companies interviewed agreed data is the lifeblood and lynchpin of business transformation. A major goal of all data management practices is to capture data in a format that enables effective modeling for predictive decisions and sharing (with appropriate privacy and security) with third parties. Outside finance, this concept is called Digital Twinning. This session reviews all key components needed to enable effective Digital Twinning.

Cybersecurity in a Risky World  
Hybrid Event  
Security needs to be thought of holistically, across all elements of the enterprise, in order to be effective. This starts with data analysis and classification, leads to data protection and privacy, and moves on to infrastructure and application security. This event focuses on “full-stack” cybersecurity, architecture, engineering, operations, staffing, training, and SOCs/outsourcing.
The Future of Work
Virtual Event
Everything about work is changing. To attract and retain top talent, financial services firms need to take a holistic approach to ensure exceptional employee experience from hire to retire. This means investing in the tools, technologies, and practices that enable employee satisfaction. During this session, we will cover topics including next-gen collaboration and interaction, future of end-user computing, and much more.

Transformative Technologies:
Changing What We Do, How We Do, and Why We Do It
Virtual Event
Technology allows companies to think in new ways, solve previously unsolvable problems, and explore new ways to create value for their clients and shareholders. Transformative technologies help drive business agility. Leading financial firms should now look at transformation as an organizing principle. This event will explore how financial services companies are actively using technology to transform everything from business models to operations and customer experience.

Emerging Information Technologies:
From Analytics to DAOs to Quantum Computing
Virtual Event
Digital constructs from payment mechanisms such as NFTs and digital wallets to emerging AR/VR technologies (avatars, holograms, etc.) are combining to deliver a new CXM (customer interaction model). Think of it as “Banking in Fortnite” and participate in this event to understand what it takes to deliver a superlative digital customer experience. Find out the benefits, drawbacks, and best practices.
